

Case History

Land Rover Exhaust Manifolds

Background

Hitachi Metals produce exhaust manifolds for Land Rover. 1300 of these high value manifolds had been packed in a well known manufacturers anti rust bags, but still rusted in transit and were rejected by the customer. It is a very expensive and time consuming task to reproduce the manifolds.

Hitachi Metals approached HITEK-nology Solutions Ltd to provide a solution for reclaiming these manifolds.

Treatment chosen

The manifolds were de-rusted by soaking in a vat of VpCI 422.

Once de-rusted they were de-greased using VpCI 416, and then placed back in the packing case, the packing case was lined with VpCI 126 giving the manifolds two years corrosion protection.

Date

July 2009

Customer

Hitachi Metals

Location

Derby

Product Used

VpCI 422, 416 & 126
