

Case History

Gas Pipes (Anacondas)

Background

FTL Ltd manufacture flexi type gas pipes known as anacondas. These pipes are fitted to gas meters.

5000 of these pipes were sent to East Europe; they corroded whilst in transit, and were subsequently returned by FTL's customer. FTL Ltd required these pipes to be de-rusted and then protected from future corrosion whilst in transit, FTL also required the 5000 pipes were reclaimed and protected within a few days.

HITEK-nology Solutions Ltd was approached by the customer to provide a solution.

Treatment chosen

The pipes were soaked in 5% VpCI 416 to clean / degrease them. The pipes were then soaked in VpCI 422 to remove the rust, dipped in 5% VpCI 416 to clean off the VpCI 422, prior to being protected with 10% VpCI 377.

This treatment resulted in a low cost solution, ensuring the pipes were reclaimed in the required time and the sent to East Europe where they were accepted by the customer of FTL Ltd.
